Karen

The EPA has been closely following the VCP Progress and is disappointed that it is not further along. We anticipate being complete with our actions in early June if we do not hydroclean the ASTs. We would prefer this be done by The PRP Group. Our expectation is that we have a transition with no stoppage of work and we still believe that is necessary.

Also, the EPA has been coordinating with local residents and local organizing groups. It is clear that the residents and organizing groups do not want to see a similar type operation at this location. They have suffered enough with the former CES Operations and its abandonment. The residents and organizers have requested that the site be cleaned up to residential standards to facilitate a future use of residential. The EPA expects a future use to be compatible with the surrounding land use which is primarily residential and educational. Therefore, EPA also supports and expects the cleanup to residential standards.
